

## HTML Lab Assignment 3

10/12/2022

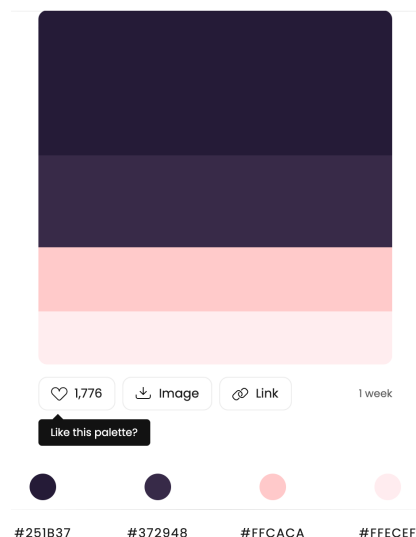

Build your personal website that contains at least five webpages (for example, Home, Schedule, Information). On top of each webpage should show a navigation bar. This navigation bar should be an unordered list and contain the links that direct to each web page respectively.

When the mouse move over to one of the navigation item, the background and text color should both change. The color combination (text color, background color, hover text color & hover background color) must be one of the color palettes that provided by <https://colorhunt.co/>

For example, the above example use the color from the color palette shown below. (Show the TA which color palette you choose when you get graded)

color palettes that provided by <https://colorhunt.co/>

Part II:

On one of your webpages, it should have the structure shown as below:

There are two sub-division (2a, 2b) that align horizontally. The background colors of division 1 should be different from 2a & 2b. In 2a, there should be one rounded images of yourself followed by your name and job title. In 2b, there should be one unordered list below your biography. The unordered list should contain three list items that shows in three different bullet colors.

- Adele
- Agnes
- Billy

For displaying a rounded image, check this example:

[https://www.w3schools.com/howto/howto\\_css\\_rounded\\_images.asp](https://www.w3schools.com/howto/howto_css_rounded_images.asp)

You can decide what you want to display for other 4 webpages. But each of them should contain the same navigation bar on the top, which links to other 4 webpages.

Upload your website to github.
